

Project No 211859
PLANETS
Probabilistic Long-Term Assessment of New Energy Technology Scenarios

SP1 – Cooperation
 Collaborative project
 Small or medium-scale focused research project

DELIVERABLE No 2

[Detailed Workplan, including stakeholder identification list]

Due date of deliverable: end of February 2008
 Actual submission date: 20 March 2008

Start date of project: 1/1/2008

Duration: 30 months

Organisation name of lead contractor for this deliverable: The Energy research Centre of the Netherlands (ECN)

Revision:

Project co-funded by the European Commission within the Seventh Framework Programme		
Dissemination level		
PU	Public	X
PP	Restricted to other programme participants (including the Commission Services)	
RE	Restricted to a group specified by the consortium (including the Commission Services)	
CO	Confidential, only for members of the consortium (including the Commission Services)	

Detailed Workplan, including stakeholder identification list

The Energy research Centre of the Netherlands (ECN), Fondazione Eni Enrico Mattei (FEEM)

1. Introduction

The goal of this short document – the Detailed Workplan of PLANETS (**P**robabilistic **L**ong-term **A**sessment of **N**ew **E**nergy **T**echnology **S**cenarios) – is to outline the work schedule envisaged in the project description taking into account the suggestions and decisions partners agreed upon during their project kick-off meeting on 22 February 2008 in Milan, Italy. This document complements the PLANETS Description of Work (DoW), which as such makes integral part of this Detailed Workplan.

2. Kick-off meeting suggestions

Agreement was reached with regards to two important aspects of the work to be performed under the PLANETS project: (1) **calibration parameters** and values as under WP2 of the project, (2) definition of **policy scenarios** as meant under WP5 of the project.

(1) **Calibration parameters.** It will explicitly not be the intention to fully understand all the differences that the six different PLANETS models can generate, but to at least assume the same or similar values for a minimum series of common calibration parameters. Hereby all six modeling partners can produce baseline scenarios that at least on the basis of these parameters are not expected to differ. Observed differences between the business-as-usual scenarios generated by the six models - which certainly are not avoidable - can then be attributed to the various features of these models and the parameter assumptions other than those with regard to these basic calibration parameters.

In particular, partners have agreed that:

- For **population growth**, we use the medium variant projections as reported in UN (2007).
- For **GDP growth**, we use the reference estimates in line with those underlying EU sponsored scenarios such as EC (2006). Consistency with shorter term projections such as World Bank (2008) will be analyzed.
- For the **real interest rate**, we adopt as guideline a value of 5%/yr, while recognizing that some models include multiple different rates at once to match observed market rates.

(2) **Policy scenarios.** WP5 does not truly start before the second meeting in Vilnius on July 7 2008, but we agreed that it would be good to know right from the outset what the type of policies are that we want to focus on.

In particular, we therefore agreed to adopt two general policy frameworks, the details of which may be made more explicit at a later point in time. These two policy frames are inspired by the European Union energy and climate policies:

- For the short term (2020), a triple-20 policy framework, in which 20% CO₂ emission reductions are achieved, a 20% share of renewables, and a 20% energy efficiency or

savings level, will be assumed for the EU. For the rest of OECD countries, similar targets will be envisioned taking into account the likely adoption of new policies in the various regions. Participation of developing countries will be discussed but it's likely to be very mild within this time horizon.

- For the longer term (2050), a 50% emission reduction with respect to 1990s will be assumed for all developed countries, and binding targets will also be set for developing countries. Additionally, a more stringent policy for both developed and developing countries in line with the IPCC climate change long term objectives will be analyzed.

3. Work-schedule.

The timing and organization of work as described in the DoW has been confirmed. Anticipation of discussion of future activities such as those outlined above is meant to foster the interchange among partners.
