- 21:30 End of event (at the latest)

The SECURE project

The SECURE project, carried out by 15 major European research institutions, started in 2008 and aimed at building a comprehensive framework for measuring the security of energy supplies in the EU. Assessing the risks related to geopolitics, price formation and the economic and technical design of energy markets inside and outside of the EU, the SECURE project focused on both qualitative and quantitative analyses, adopting a global as well as a sectoral approach.

The models, tools and policy recommendations provided by this project will serve policy-makers to formulate energy security policies taking into account the related costs, benefits and risks.
